Glitch Image Arrays
February 18, 2020

In this assignment we were asked to create random 'Glitchy' effects and work on state machines in order to create a collage of both images and shapes that appear alongside a timer. Using the skeleton from imageSequenceP5, I improved from this and created a slideshow where images and shapes popped up randomly.

I enjoyed working on this project and feel like I understand state machines much better than in the previous project. I am proud of the outcome and the overall aesthetics of this assignment. If I had more time, I would add more changes with the mouse interaction. I tried to create an array of colors that would change the circle color with the timer, but I could not make them have an opacity too.
